

TIMBER GRIPPER

New Generation

*Intelligent Vacuum Optimized
for Wood Handling*

UNIGRIPPER

TIMBER GRIPPER

TimberGripper is developed for the rough environment that handling of untreated wood implies.

TimberGripper is the natural choice when designing a new wood-handling vacuum system, and is also frequently used to upgrade and improve existing wood-handling systems.

TimberGripper is equipped with Unigripper's well-known, patented valve technology, which automatically senses the position of the product and focuses the lifting force. The technique makes it possible to use the same tool for a broad range of products.

TimberGripper is available in a number of standard variants that can be delivered with shorter lead times and at attractive prices. The concept is also customizable in size and design.

TimberGripper has since its introduction focused on maintenance friendliness and robust solutions. With TimberGripper you always get a solution tailored to your needs.

TimberGripper Standard Variants

TYP	TG 1250/220	TG 1250/300
Length	1250 mm
